

RIDDANCE

All Round Detoxifier

- Purifies the body
- Improves natural detoxification
- Regulates body functions

What is toxin?

Generally, we can classify toxins into 2 categories, one that is caused by external factors, while the other is produced internally. External toxins are also known as environmental toxins which are caused by air pollutions (e.g.: vehicle fumes, factory pollutants and dust), water pollutions (e.g.: industrial / chemical wastes), food toxins (e.g.: usage of chemicals, fertilizers and additives) and effects of antibiotics.

Internal toxins are produced by glucose, protein, fat and others during the process of metabolism. These result in producing toxins and free radicals, which will disrupt the body functions as well as the immune system. If the toxins are not removed from the body in time, it will cause various diseases and illnesses.

RIDDANCE

RIDDANCE is formulated from natural herbs and a detoxification product. It cleanses and detoxifies our entire body.

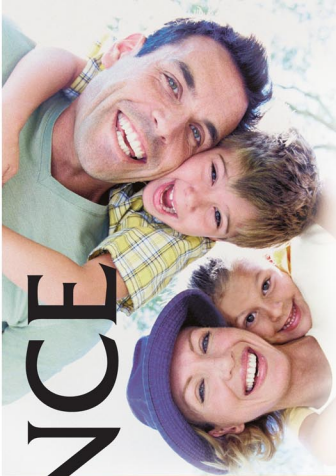

Not only RIDDANCE plays the role of a filter to the body, but it also cleanses toxins.

For years, RIDDANCE has been tested by researchers that it is a remarkable health product for body detoxification.

The molecules in RIDDANCE can enter into the human body and help to eliminate toxins and activate the body cells to act as antioxidants. It helps to improve natural detoxification and regulate body functions.
